SHEF_UPLOAD_AGGREGATE_MEASUREMENT

char *	station
char *	datatype
char *	measurement_date
char *	measurement_time
double	measurement_value

If the last two characters in the shef code are 'MM':
1) Trim off the MM
2) Generate key=datatype^measurement_date^measurement_hour
3) If key in hash table: if (measurement_value < prior.measurement_value) then
datatype = ${datatype}_min
4) If key in hash table: if (measurement_value > prior.measurement_value then
datatype = ${datatype}_max
5) Set key to hash table
